

### High-Performance Power

The **VDC•9 MKII** is our latest high-performance regulated 9V DC linear power supply, which can be used to improve the performance of many audio products including Wadia 170/171 iTransports, and Squeezebox Duet. These supplies offer vastly improved performance over the noisy switched-mode types included with most products.

Input power is handled by a high quality Schurter IEC socket with AC power switch, then fed to a custom 35VA transformer and rectified by a discrete schottky diode bridge, and filtered with over 20,000uF of low ESR capacitance. Regulation is provided by a Linear Technologies circuit with loop filter to further reduce ripple and noise. The result is a supply with very low output impedance for great dynamics, and extremely low noise.

Other features include a shielded anti-resonant chassis fabricated from 1/8" thick T6063 aluminum with 3/16" thick front panel. Non-magnetic stainless steel hardware. User-selectable input voltage (120~240V). AC power cord & DC output cables are included. 5 Year Parts & Labor warranty.
