

Channel Islands Audio VDC•9.0

Upgrade Power Supply for Wadia™ 170i / Squeezebox™ Duet

Improved Performance for Squeezebox Duet / Wadia 170 iTransport

Our new **VDC•9.0** is the perfect upgrade for your Wadia 170 iTransport or Slim Devices/Logitech Squeezebox™ Duet. The upgrade eliminates noise caused by the standard switching supply, which can contaminate the internal digital and analog circuits. The design is based around a 4A continuous rated transformer, discrete Schottky diode bridge rectifier, AC line filter, precision voltage regulator circuit, and 13,600uF of filter capacitance.

These systems, when used with a quality external DAC system such as VDA•2/VAC•1 creates a convenient digital audio source that competes with some of the world's most expensive CD players! Available in 120 or 240v input. AC input and DC output cables included.
(for Squeezebox Classic or Touch, see VDC•SB)

Specifications

AC Input Voltage: 120/240V
AC Output Voltage: 9V DC @ 2.0 Amps
Accessories: IEC Type AC Cable, DC Output Cable
Dimensions: 4.40" w x 2.65" h x 4.40" d
Warranty: 1 Year Parts & Labor
