

## VDC•9.0 High Current Power Supply

### **Introduction:**

Thank you for purchasing the VDC•9.0 Upgrade Power Supply.

The VDC•9.0 is a high performance replacement supply designed specifically for the Slim Devices Squeezebox™ Duet or Wadia™ 170 iTransport.

Due to continuous high current demand of these devices (& cost), the manufacturers include small "switching" supplies to provide power. Although this is sufficient for mediocre sound quality, it isn't the best approach for maximum performance.

The VDC•9.0 is a 9v DC regulated linear power supply...meaning there is no switching to add noise to the audio signal. The design uses a high quality transformer, discrete Schottky bridge rectifier, and low-noise filter/regulator circuit, providing the best power possible.

### **Accessories:**

Cables:

- 1 IEC Power Cable
- 1 DC Output Cable for Squeezebox™ Duet
- 1 DC Output Cable for Wadia™ 170 iTransport

### **Setup Instructions:**

Installation is simple...just replace the standard supply with VDC•9.0 and supplied cables.

### **Warranty:**

Your CIAudio product is covered by a 1 year Parts & Labor Warranty. For warranty service or technical support, contact us at...
