

VDC•SB High Current Power Supply

Introduction:

Thank you for purchasing the VDC•SB Upgrade Power Supply.

The VDC•SB is a high performance replacement supply designed specifically for the Slim Devices Squeezebox™ Classic or Touch models.

Due to continuous high current demand of the Squeezebox™ (& cost), the manufacturer includes a small "switching" supply to provide power. Although this is sufficient for mediocre sound quality, it isn't the best approach for maximum performance.

The VDC•SB is a 5v DC regulated linear power supply...meaning there is no switching to add noise to the audio signal.. The design uses a high quality transformer, discrete Schottky bridge rectifier, and low-noise filter/regulator circuit, providing the Squeezebox™ with the best power possible.

Setup Instructions:

Installation is simple...just replace the standard supply with VDC•SB and supplied cables. Do **NOT** use VDC•SB with products other than Squeezebox™ Classic or Touch.

Warranty:

Your CIAudio product is covered by a 1 year Parts & Labor Warranty. For warranty service or technical support, contact us at...
